

Accessing Investor Online with Windows 10

Microsoft has formally released Windows Edge as the default browser for Windows 10. Whilst we undertake full system testing with the latest browser and make any necessary system changes, you can still access Investor Online using Internet Explorer (up to version 11), Firefox, Safari, Netscape, Google Chrome and Opera.

If you wish to use Internet Explorer on your machine, you may need to search for the program using the 'search' button as circled below.

Once you have opened Internet Explorer (or one of the other supported browsers) you will be able to access and login to Investor Online.
